Summary

Applied Mathematics and Statistics graduate with 2+ years of experience across data science, data engineering, analytics and full stack development. Hands-on experience developing data pipelines, audit and exception-detection solutions, NLP-based matching and dashboards using Python, Pandas, MongoDB and Power BI, and AI-assisted full stack features with TypeScript and Flutter.

Skills

Programming Languages: Python, TypeScript, Dart, R, MATLAB, Java
Libraries & Frameworks: Pandas, NumPy, Matplotlib, Seaborn, scikit-learn, TensorFlow, Keras, PyMongo, Tidyverse, lubridate, caret, NestJS, React, Flutter
Databases & BI: MongoDB, PostgreSQL, Studio 3T, Microsoft Power BI, Tableau, Dataiku, Minitab
Cloud & CI/CD: AWS (EC2, S3), Azure Blob Storage, GitHub Actions, Jenkins, Railway, Vercel
Developer Tools: Claude Code, Git, GitHub, Docker, Fastlane, Jira, Linear, Jupyter, Postman, LaTeX
Languages: Arabic (Native), English (Fluent), Spanish (Beginner)

Experience

Freelance – Full Stack Developer | Join Future W.L.L. Bahrain, Remote
Apr 2026 — Present

- Main contributor to HiSalon, the company's multi-tenant salon management SaaS, and contributed to HiPay and HiChat, with most of the work done through an agent-driven workflow with Claude Code.
- Maintained GitHub Actions CI/CD: pull request test gates, AWS deploys, and Fastlane iOS releases.
- On HiSalon, built HR and payroll, gift cards, loyalty, offers, and a digital contract-signing flow across a NestJS and PostgreSQL backend, a React dashboard, and two Flutter apps.
- On HiPay, a payment gateway, fixed the checkout and SDK for Apple Pay, BENEFIT, and Flooss.
- On HiChat, a customer experience platform, fixed WhatsApp campaigns and phone number handling, and let agents reopen expired chats with approved templates.

Graduate Trainee – Data Science | Saal.ai Abu Dhabi, UAE
Sep 2024 — Sep 2026

- Primary developer of a procurement audit platform on Microsoft Dynamics 365 ERP data, authoring 28 of its 38 exception checks across procure-to-pay, vendor master data, and access rights.
- Designed the platform's Delegation of Authority control set, six checks that trace ERP workflow records to flag purchases approved by the wrong person or at fewer levels than company spending limits require.
- Flagged near-duplicate line items by pairing fuzzy and Levenshtein similarity with a Cross-Encoder NLP model, and containerized and scheduled the pipeline with Docker and APScheduler.
- On other projects, created Power BI and Tableau dashboards for PoCs, built ETL pipelines from Jira user stories, designed ER diagrams, wrote documentation, and resolved client data issues.

Data Scientist Intern | Saal.ai Abu Dhabi, UAE
Mar 2024 — Sep 2024

- Worked with NoSQL databases (MongoDB, PyMongo) and built a REST API with Flask, validated using Postman and documented with Swagger UI.
- Completed Dataiku Core Designer and ML Practitioner certifications, applying them to design a data processing flow.
- Applied Python (Pandas) for data cleaning, transformation, and feature engineering, including a pipeline that improved predictive workflows within a microservices architecture.
- Collaborated with UI/UX and frontend teams to take a dashboard from wireframe to production.

Data Analyst Intern | Daman – National Health Insurance Company Abu Dhabi, UAE
Jul 2022 — Sep 2022

- Performed data analysis, visualization, and reporting using Microsoft Power BI to support business intelligence initiatives.
- Built dashboards to highlight key performance metrics, cost drivers, and trends.

Projects

Stmnt: Bank Statement Analyzer | Website | App Store
Feb 2026 — Present

- Sole developer of an iOS app, published on the App Store, that reads bank statement PDFs from any bank and turns them into spending breakdowns, subscription tracking, and spending forecasts.
- Built the pipeline that pulls transactions out of unstructured PDF text with Google Gemini, then categorizes them, removes duplicates, and flags unusual spending across more than 35 currencies.
- Developed the app in Flutter and Dart, working through an agent-driven workflow with Claude Code while owning the architecture and reviewing every change.

On a Generalization of Kernel RLS to Nonlinear State-space Systems | GitHub
Sep 2022 — May 2023

- Researched and wrote the full paper for the senior graduation project at Khalifa University, supervised by Prof. Ibrahim Elfadel and Prof. Jorge Zubelli.
- Derived the ARMA learning algorithm and implemented least squares, recursive least squares, and kernel recursive least squares (KRLS) in MATLAB.
- Tested KRLS on the Santa Fe time series prediction benchmark, compared the results against previously published ones, then analyzed how the kernel adaptive ARMA (KAARMA) algorithm improves on it.

Education

Khalifa University – BSc in Applied Mathematics and Statistics Abu Dhabi, UAE
2018 — 2023 CGPA: 3.30

Al Nahda National Schools – High School Diploma Abu Dhabi, UAE
2015 — 2018 Grade: 95.9

Certifications & Awards

Supervised Machine Learning: Regression and Classification — DeepLearning.AI (Dec 2024)
Dataiku ML Practitioner — Dataiku Academy (Apr 2024)
Dataiku Core Designer — Dataiku Academy (Apr 2024)
Python for Data Analysis Workshop — Khalifa University (Jun 2022)
Dean's List — Khalifa University (2021 & 2022)
Python Data Structures — University of Michigan (Aug 2019)
Programming for Everybody — University of Michigan (Aug 2019)

Test Scores

GRE General Test (Jan 2023): Verbal Reasoning 139, Quantitative Reasoning 151, Analytical Writing 3.5
EmSAT Achieve Result: English 1875 (Feb 2023), Math 1025 (Aug 2018)

Volunteering

Feed and Reap Initiative Abu Dhabi — Absher Ya Watan Team (Apr 2023): Participated in Ramadan 2023 meal packing and distribution.
Lead Peer Mentor — Khalifa University (2022–2023): Mentored 9 freshmen over two semesters.
Mawhibatna Program Volunteer — Sandooq Al Watan (Jul 2019): Organized program activities.
